

BACACIER®

ALTEO®

DECKING PROFILES

Custom length
8 profiles available
Perforated option
Cost-effective and strong product

The range of ALTEO® steel supports can be used to design a **waterproof roof** structure. These profiles are used to support insulation covered with a **waterproof** ply. ALTEO® supports are available in several different heights to suit different spans and loads. Different types of **perforations** are available (full, pan, web). A **painted finish** is available on the underside. Can also be used for the construction of a **high humidity** building with the AQUALTEO® solution.

CHARACTERISTICS

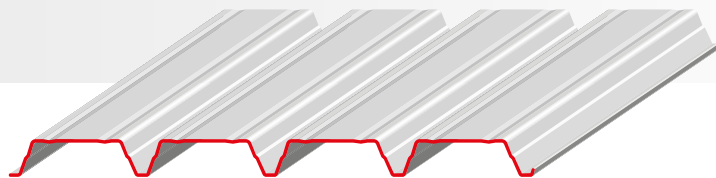

Thickness : 0,75 and 1,00 mm

Finish : Galva
Polyester 15µm
(other coatings available on request)
